

## Petition of Residents of New Cuyama to S. B. LAFCO Re: Proposed "Cuyama Basin Water District"

We, the undersigned residents of New Cuyama and served by a LAFCO authorized water district hereby protest that we have been summarily excluded from participation in the formation of the above proposed water district which is now to be considered by the Santa Barbara LAFCO. This new district is named "Cuyama Basin Water District". (Our CCSD – has been sustainably using its water resources over decades and only recent new grower activity has caused our well levels to drop).

As citizens and affected community members of the largest population center in the Cuyama Valley we are immediately adjacent to and surrounded by the proposed new Water District. The formation and purpose of said district includes authority which may not be in our collective interests or even achieve the stated purpose of sustaining the water in our basin. We protest the calculated exclusion of our right to express any opinion on its merits. As legitimate stakeholders in the Cuyama Valley, this violates the purpose of SGMA and LAFCO procedure.

Petitioner's purpose is to *sustain ITS resources for the beneficial use of all those who use the water WITHIN the proposed district.* That excludes New Cuyama.

We further believe that the manner in which public participation was conducted was inadequate and the actual planning of said District was conducted in a manner that intentionally excluded all but large land owners and large corporate interests and Santa Barbara County Water Agency. This on its face, is a means of avoiding opposition for the purpose of consolidating as much corporate control of the remaining water resources in the Cuyama Basin, as the sustainability purpose of SGMA might allow.

We respectfully request the Santa Barbara County LAFCO Commissioners deny this petition outright in its present form and its narrow purpose.

(Our CCSD – has been sustainably using its water resources over decades and only recent new grower activity has caused our well levels to drop).

As citizens and affected community members of the largest population center in the Cuyama Valley we are immediately adjacent to and surrounded by the proposed new Water District. The formation and purpose of said district includes authority which may not be in our collective interests or even achieve the stated purpose of sustaining the water in our basin. We protest the calculated exclusion of our right to express any opinion on its merits. As legitimate stakeholders in the Cuyama Valley, this violates the purpose of SGMA and LAFCO procedure.

Petitioner's purpose is to *sustain ITS resources for the beneficial use of all those who use the water WITHIN the proposed district.* That excludes New Cuyama.

We further believe that the manner in which public participation was conducted was inadequate and the actual planning of said District was conducted in a manner that intentionally excluded all but large land owners and large corporate interests and Santa Barbara County Water Agency. This on its face, is a means of avoiding opposition for the purpose of consolidating as much corporate control of the remaining water resources in the Cuyama Basin, as the sustainability purpose of SGMA might allow.

We respectfully request the Santa Barbara County LAFCO Commissioners deny this petition outright in its present form and its narrow purpose.
